

SOC Analyst L1 Alert Reporting

A tryhackme incident response

As demonstrated in the SIEM dashboard, a phishing attack was detected and flagged for investigation. As a Level 1 SOC analyst, my responsibility is to triage the alert, document the incident clearly, and provide a concise report that includes the timeline, evidence, and escalation rationale. This ensures that suspicious activity is properly tracked and handed over to higher-tier analysts if deeper investigation is required.

Mar 27th 2025 at 19:25	Email Marked as Phishing after Delivery	Medium	Awaiting action	None	None	 
Description:	The email was classified as phishing post-delivery after an automated analysis. If the email is spoofed or contains any suspicious links or files, it must be deeply investigated.					
Subject:	Important Update: Microsoft Teams Pricing Increase					
Body Keywords:	600% price increase; urgent notice; download the report; read the details;					
Sender:	Microsoft Support<support@microsoft.com>					
Recipient:	Eddie Huffman, IT Manager<e.huffman@tryhackme.thm>					
Security Checks:	SPF/Fail; DKIM/Fail;					
Attached URLs:	None					
Attached Files:	REPORT.rar					

report:

At 19:25 UTC on March 27th 2025, an email impersonating Microsoft Support with the subject “Important Update: Microsoft Teams Pricing Increase” was delivered to Eddie Huffman, IT Manager, and later flagged as phishing post-delivery due to suspicious keywords "600% price increase; urgent notice; download the report; read the details;", failed SPF and DKIM and the presence of a compressed REPORT.rar file attached. This indicate strongly suggest a spoofed sender and potential malicious payload, confirming the alert as a True positive phishing attempt with medium severity, requiring escalation for deeper investigation of the attachment and user notification to prevent compromises.
